

Numbers don't lie.

10 reasons to move ahead
with Generix Invoice Services.

If anyone tells you that digitizing invoicing is easy, they're lying.

It's a complicated transformation—automating complex approval workflows; extracting usable data from paper, PDF, and emailed invoices across countless products and services; then feeding it back into those approval workflows; and ultimately, just trying to navigate the intricate and ever-shifting maze of e-invoicing regulations that seem to differ in every market where you do business.

The good news is that Generix isn't going to lie to you: We'll do it for you, and we do it all.

Only Generix combines expert, in-depth, e-invoicing compliance with a complete, end-to-end, e-invoicing platform.

So you get timesaving, error-catching, fraud-preventing power packed with insightful, turnkey analytics.

Sure, it's complex. But we're far more than capable, and we've got the data to prove it.

Here's what we do.

Generix Invoice Services automates and simplifies invoice capture and submission, turning paper processes into an efficient, electronic system that connects your financial applications to your business partners: customers, suppliers, subsidiaries, financial institutions, government bodies, and local authorities.

It's the accurate, cost-effective tool for real-time tracking, automated compliance, and seamless accounting integration—for

every invoice that comes in or goes out. EDI, portal, OCR, intelligent PDF, and more. In the end, that means better overall financial operations and ensured compliance with global standards.

So instead of managing paper invoices, human errors, and constantly changing regulations, your team gets greater visibility into financial and operational data. Plus the time to focus on the work that really pays.

Generix Invoice Capabilities

E-Invoicing & Compliance

- Invoice Capture
- Invoice Submission
- Fraud Management
- Global Compliance
- VAT Risk Management
- Probative Archiving

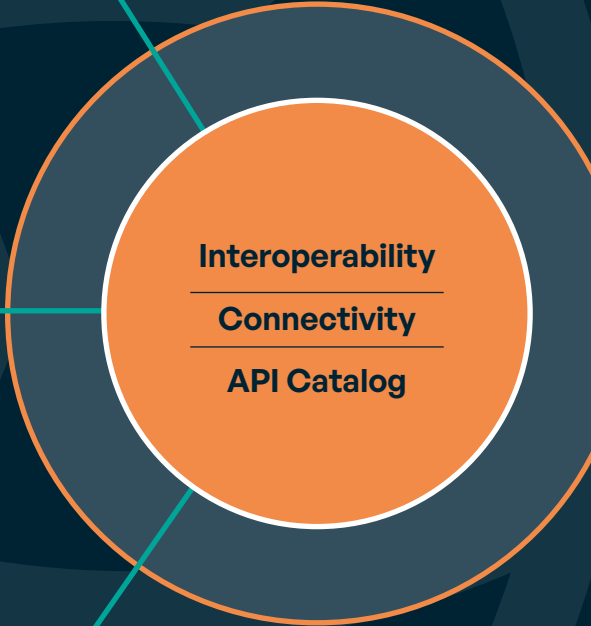

Business Process Automation

- AP Automation
- AR Automation
- P2P Collaboration
- O2C Collaboration
- Payment Embedded
- Financing Embedded

Governance Analytics

- Advanced Monitoring
- KPI & Reports
- Analytics
- VAT Data Services
- API Catalog
- Interoperability

Here's the proof.

01

80% lower processing costs.

This one is easy. When Generix automates your AP and AR processes, they're more efficient and affordable to process. You're also eliminating human error and improving data quality, which saves even more.

02

100% of your invoicing data.

Generix automatically captures all the details of every invoice you send and receive—whether that data is on paper or in an email—using OCR and machine learning to extract and submit the information you need. This cuts manual work and mistakes, improving compliance and increasing approval speed.

03

3-day processing cycle.

E-invoicing reduces processing time from 14 business days to an average of three. So you'll have plenty of time to think about what you're going to do with all that time.

04

90,000 invoices per year per FTE.

A person managing paper invoices can typically process 6,000 per year. With Generix, that number jumps to 90,000 per full-time employee. Which number seems better to you?

05

4-month ROI.

"How are we gonna pay for all this?" It's a valid question. Generix's valid answer comes down to hundreds of thousands in savings. And payback in roughly one quarter.

06

3 unique qualifications.

No one else offers the full invoice-lifecycle expertise Generix delivers every day: Business expertise in terms of procurement, invoicing, and payment processes. Legal expertise in terms of applicable regulations. And technical expertise in terms of the tools it takes to handle tax dematerialization.

07

70+ countries and 50+ tax authority platforms.

Again, it's all about compliance and scale. And Generix makes sure all incoming and outgoing invoices meet the latest local and global regulatory requirements. So you can stop worrying about conformity and put an end to penalties.

08

800 million invoices.

We've done this before. Generix software processes 800 million electronic invoices per year. And if that wasn't enough, we also manage 40 million order lines per month and 2 billion EDI messages a year. So no matter how much you've got, we've got it.

09

3% discounts vs. substantial late fees.

With e-invoicing, you'll always pay on time, so you'll never pay another late fee. And when you add to that the average 1-3% discount for paying early, you get cash predictability that pays off.

10

Dozens of certifications.

Generix regulatory and financial-security compliance protocols are recognized by AECOC, GS1, Minefi, TAJ, ISO27001, ISO9001, ISO22301, PCI DSS, SOX, European Commission, DGFIP, PEPPOL, and a host of other influential and governing acronyms.

To sum it all up, Generix delivers:

Unmatched, in-market regulatory expertise—boosting compliance and confidence while keeping you ahead of every tax, invoice, audit, and security standard.

Unparalleled breadth—covering everything from invoice capture and submission to error and tax management, accounting process automation, archiving, payments, and supplier/customer collaboration—as well as in-depth analytics. So nothing slips through the cracks, and you control costs and compliance.

Unrivaled scale—extending digital accuracy and speed across your full financial function, so no matter what growth brings, you'll be ready.

One more look at why.

Generix isn't the only option, it's the best option. But only if you're looking for:

- **Touchless invoice processing**, so you can get other things done.
- **Automated procure-to-pay (P2P) and order-to-cash (O2C) workflows**, so everything is taken care of, end to end.
- **Worry-free compliance**, so you're meeting requirements around the world.
- **Secure archiving**, so everyone's data is safe from theft and fraud.
- **Digitalized, centralized invoicing for multiple formats**, so everything you need is in one place.
