

Tax Technology. Reimagined.

Delivering UAE-compliant, sovereign-based tax technology solutions at enterprise scale.

Spotlight on: The UAE's Shift to Mandatory e-Invoicing

Tax authorities across the GCC are accelerating the shift towards real-time data and transaction-level visibility.

With the UAE e-Invoicing mandate approaching, organizations face tight timelines and significant operational impact. This transition represents not just a regulatory change, but a fundamental transformation in how tax data is managed, validated, and reported.

Compliance risks

Getting UAE e-Invoicing wrong can lead to clearance failures, regulatory scrutiny, ERP disruption, costly rework, and tax penalties.

UAE Mandate Timeline

JULY 1, 2026

Voluntary adoption begins

Pilot program begins for selected taxpayers. Early adopters begin testing systems with the FTA

- ✓ UAE PINT-AE (standardised structure XML format - Peppol BIS 3.0 model)

About DaribaTech

We are a specialized tax technology company founded to bridge the gap between complex GCC tax regulations and enterprise digital reality. Global solutions often fail to meet local mandates, data sovereignty requirements, or regional operating models. DaribaTech is built in the UAE for the GCC - combining regulatory depth with enterprise-grade technology and full UAE data sovereignty.

We offer a growing suite of AI powered solutions covering:

- ✓ End-to-end e-Invoicing solution (powered by RTC Suite)
- ✓ BEPS Pillar 2 automation
- ✓ VAT analytics/recovery

Why choose us?

Our focus is clear: enterprise-grade e-Invoicing and tax platforms built for organizations operating across jurisdictions, legacy systems, and heightened regulatory scrutiny.

Our customers operate in high-scrutiny environments where security, audit-readiness, data sovereignty, and scalability are essential.

- **UAE-hosted infrastructure**

Powered by RTC Suite, our solution provides:

- ✓ Data sovereignty - your data sits in the UAE
- ✓ Low latency and high performance
- ✓ Local team support - no offshore delays

- **Enterprise architecture**

Multi-entity, high-volume, ERP-native integrations with audit-grade controls.

- **GCC-centric**

Built specifically for UAE FTA, KSA ZATCA and regional mandates.

- **Designed for multi-entity**

Built to support complex organizational structures across multiple ERPs and taxpayer segments.

- ✓ Peppol-aligned architecture
- ✓ Role-based access controls
- ✓ Full audit logging
- ✓ Enterprise-grade SLAs
- ✓ ISO 27001 / 22301 (if applicable or planned)

- **Expert-led**

Local team of senior VAT practitioners, solution architects, and integration specialists who understand VAT law, FTA expectations and system design.
